

DIGICOM AUTODIALER

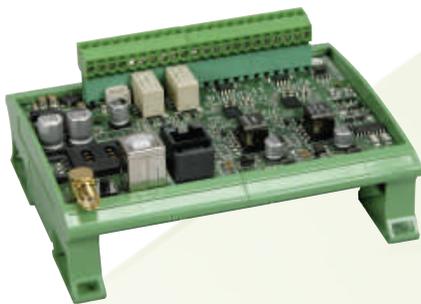

GSM Gateway

£185

The 3G Lift has one FxS analog port to connect to any remote alarm system. The analog port simulates a PSTN - Telecom line using the GSM network instead of a wired line, which provides an effective cost saving solution.

Features:

- Universal 3G GSM GPRS communicator
- Suitable to all phone alarm systems
- Penta-band module
- Integrated battery back-up
- EN81-28 compliant
- Roaming block management

PSTN Lift Dialer/GSM Lift Dialer

£198

PSTN or GSM Lift Dialer is a remote alarm system designed to ease the installation by requiring 2 wires for voice, data and signalling. Suitable for new instalations, as well as modernisations, in conjunction with the DIGICOM VoiceBOX it fits inside electrical panels by simply fixing onto the DIN rail. EN81-28 Compliant

Boxed with PSU
£275

VoiceBOX & VoiceBOX Car

VoiceBox is an innovative speakerphone device for remote alarm systems inside lifts. It is versatile, easy and quick to install in the car behind the control panel, it allows activation of the remote alarm system and establishes bi-directional audio communications to the service centre or engine room.

VoiceBOX Car
£65

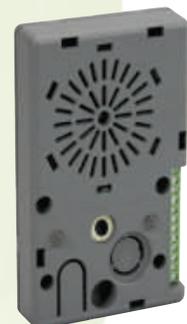

VoiceBOX
£75

Installation is simple, which requires 2 wires coming from the 2G Dialer or PSTN Dialer, which is where the device draws its power from.

Features:

- EN81-28 & EN81-70 Compliant
- Lift emergencies LEDs
- Integrated microphone and speaker
- Requires only 2 connection wires
